What are the disadvantages of a 12 volt inverter?

The disadvantage is that the 12 V inverter will draw 5 times the current a 60 V inverter draws for the same output power. This current needs to be supplied by the step-down converter. This will also incur additional losses in the step-down converter. I'd swap the 12 V inverter for a 60 V inverter. I had a hunch. I'll make the swap.
