

Analysis of China's 5G base station energy-saving path

How much energy does a 5G base station use?

China Mobile's measurement report 9 indicates that the energy consumption of a 5G base station is 4.3 kWh, which is four times that of a 4G base station at 1.1 kWh. One 5G base station is estimated to produce 30 t of carbon emissions in one year of operation 10.

How can we improve the energy efficiency of 5G networks?

To improve the energy efficiency of 5G networks, it is imperative to develop sophisticated models that accurately reflect the influence of base station (BS) attributes and operational conditions on energy usage.

How much carbon does 5G emit in China in 2021?

The results indicate that, due to the high carbon emissions resulting from the new infrastructure, the carbon emissions of 5G base stations in China in 2021 amounted to 49.2 MtCO₂ eq.

Does China have a 5G network?

Given that China currently has the largest 5G network in the world (~1.53 million base stations by the end of 2021, Table S1) and that base station number was projected by up to 6-8 million by 2030 (CCID Consulting, 2020), concerns are being expressed regarding 5G mobile networks' environmental effects and sustainability.

How does the 5G network affect carbon efficiency?

Carbon efficiency, the amount of network traffic that can be delivered for one unit of carbon emissions, decreased from 2.98 TB per tCO₂ to 2.08 TB per tCO₂ (Fig. 1c). After the launch of the 5G network, there was a large and rapid increase in carbon emissions.

Could 5G help achieve China's Carbon Peak target?

In the case of a 5G low power load (Fig. 5 b), the fraction reduces to 0.13 %, suggesting that power load from switching 4G to a 5G network could reduce about 6 % of CO₂ emission subject to the nation's carbon peak scenario. In light of this, replacing the 4G with a 5G network could help achieve China's carbon peak target.

The suitable energy saving strategy combined with different energy saving functions, including an initial relative threshold to the scenario and executable energy saving time schedule, will be ...

The lean design of 5G NR standards represents a major improvement compared to LTE, enabling unprecedentedly low energy consumption in 5G networks, and beyond.

Here we develop a large-scale data-driven framework to quantitatively assess the carbon emissions of 5G mobile networks in China, where over 60% of the global 5G base stations are...

Analysis of China's 5G base station energy-saving path

Then, it proposed a 5G energy storage charge and discharge scheduling strategy. It also established a model for 5G base station energy storage to participate in coordinated and ...

To improve the energy efficiency of 5G networks, it is imperative to develop sophisticated models that accurately reflect the influence of base station (BS) attributes and operational conditions ...

In wireless cellular networks, optimising the energy efficiency (EE) of base stations (BSs) has been a major architectural challenge. The BSs are major consumers of energy ...

5G is a basic platform for leading technological innovation, realizing industrial upgrading and developing the new economy. As an operator of national information infrastructure, China ...

The present study re-evaluated carbon emissions embodied in China's 5G network based on recently updated 5G base station numbers in 2020 and 2021 across China, enabling ...

Abstract To further explore the energy-saving potential of 5 G base stations, this paper proposes an energy-saving operation model for 5 G base stations that incorporates communication ...

In order to reduce the carbon emissions of 5G base stations and achieve green 5G, this paper further examines the literature related to existing energy-saving technologies for 5G ...

Aiming at minimizing the base station (BS) energy consumption under low and medium load scenarios, the 3GPP recently completed a Release 18 study on energy saving ...

PDF | On Jul 26, 2021, Tan Rumeng and others published Intelligent Energy Saving Solution of 5G Base Station Based on Artificial Intelligence Technologies | Find, read and cite all the ...

The research shows that the method proposed in this paper has a certain energy-saving effect, can meet the energy efficiency requirements of ...

Large-scale deployment of 5G base stations has brought severe challenges to the economic operation of the distribution network, furthermore, ...

Scientifically analyzing the carbon reduction potential of 5G base stations and proposing an effective carbon reduction route are urgent issues for the information and communications ...

To further explore the energy-saving potential of 5 G base stations, this paper proposes an energy-saving operation model for 5 G base stations that incorporates communication caching ...

Analysis of China's 5G base station energy-saving path

Abstract--The energy consumption of the fifth generation (5G) of mobile networks is one of the major concerns of the telecom industry. However, there is not currently an accurate and ...

Reports on the Increasing Energy Consumption of Wireless Systems and Digital Ecosystem The more we use wireless electronic devices, the more energy we ...

In this paper, a framework is developed to study the impact of different power model assumptions on energy saving in a 5G separation architecture comprising high power ...

With the rapid construction of the 5G wireless communication network, the energy consumption pressure of operators, and even the overall communication industry, is simultaneously ...

Request PDF | Energy-saving and economic analysis of passive radiative sky cooling for telecommunication base station in China | The widespread application of 4G and ...

Here we develop a large-scale data-driven framework to quantitatively assess the carbon emissions of 5G mobile networks in China, where over 60% of the global 5G base ...

The optimal solutions and comparative experiments demonstrate that the proposed model can provide reasonable and robust results to support 5G cellular network planning. ...

China Telecom has been enhancing the urgency and practicality of promoting the Net Zero, building green new cloud networks, and building green 5G base stations. The new green ...
