

Belize exports solar power to households

Why has Belize invested in energy?

Belize has invested in energy for the purpose of strengthening and stabilizing its energy sector over the last 20 years. The country has made investments in hydropower, biomass, solar, and liquefied petroleum gas (LPG) to ensure energy security.

What percentage of Belize's electricity is imported?

About 40% of Belize's electricity is imported from a Mexican government-owned electric utility. Almost half the energy in Belize comes from hydroelectric power and biomass. BEL purchases 71.5% of its electricity from five domestic independent power producers (IPPs)

Does Belize use solar power?

Belize uses solar power on a smaller scale, with the Government having installed solar micro-grids and solar-powered streetlights in rural communities not yet connected to the national grid. The Government of Belize, along with Belize Electricity Limited (BEL), intends to launch a pilot project introducing electric vehicles.

What are the main sources of energy in Belize?

Energy in Belize is based on four main sources: imported fossil fuels, biomass, hydro, and imported electricity. Belize currently imports 100% of its fossil fuel use (Launchpad Consulting, 2003).

Once operational, the solar plant will supply clean, renewable energy directly to the National Grid, strengthening our energy security. The integrated battery system will help stabilise fluctuations ...
