

Finland's latest energy storage projects

Is this Finland's largest battery energy storage system?

Swedish flexible assets developer and optimizer Ingrid Capacity has joined hands with SEB Nordic Energy's portfolio company Locus Energy to develop what is claimed to be Finland's largest and one of the Nordics' largest battery energy storage systems (BESS). The 70 MW/140 MWh BESS project will be located in Nivala, northern Finland.

How will a new battery energy storage system help the Finnish grid?

After the start of commercial operations in 2026, the project will contribute an important balancing function to the Finnish grid, supporting the Finnish renewable energy expansion. The groundbreaking ceremony took place in the afternoon on Monday the 26th of May on the site near Nivala where the battery energy storage system will be built.

Are energy storage systems a solution to Finland's energy transition?

Energy storage systems offer a solution. "This groundbreaking is an important moment for Finland's energy transition and a concrete step toward a more flexible, resilient, and decarbonized energy system," said Jussi Jyrinsalo, Senior Vice President at Fingrid.

How does Finland's new sand battery work?

Finland's new sand battery in Pornainen cuts emissions by 70% and stores 100 MWh, revolutionizing renewable energy storage and heating.

Does HT Finland have a sand battery?

HT Finland has activated the world's largest sand battery in Pornainen, storing excess renewable energy as heat to power an entire town's heating needs. The system cuts heating emissions by nearly 70%, using soapstone as a low-cost, long-duration thermal storage medium.

When will the energy grid project start in Finland?

The project proponents have confirmed that the construction works will start in March 2025. The project, which is one of the largest of its kind in Finland, will provide grid services including frequency response and will be able to participate in energy trading on wholesale power markets.

Finland is making significant strides in renewable energy storage with the construction of its largest battery energy storage system (BESS). This project is set to ...

The first project, currently under construction, consists of 13 new grid scale battery energy storage systems across the south of Sweden, and is planned to add an additional 196 ...

Suomen Voima has announced details of a new energy storage venture named "Noste" in the Kemijärvi

Finland's latest energy storage projects

region of Finland. The ambitious project involves the construction of 1 ...

Two of the Nordic country's biggest battery energy storage projects have been announced just days apart.

New report: "EU energy storage action plan needed" The project in Simo is a prime example of how the current transition to a greener energy supply can be achieved in Finland: ...

With an installed capacity of 30 MW / 36 MWh, the project marks a major milestone and will play a vital role in strengthening Finland's evolving renewable energy infrastructure. Designed to ...

Global solar and energy storage leader Sungrow has announced the successful commissioning of a 60MWh Battery Energy Storage System (BESS) project in Simo, Finland, ...

Business Finland will open a call for tax credits for large clean transition investment projects in renewable energy production and energy ...

3 days ago On September 2, 2025, the fourth Green Energy Auction (GEA-4) organized by the Philippines' Department of Energy (DOE) concluded successfully, securing commitments for ...

Capable of storing 100 MWh of thermal energy from solar and wind sources, it will enable residents to eliminate oil from their district heating ...

Finland has activated the world's largest sand battery in Pornainen, storing excess renewable energy as heat to power an entire town's heating needs. The system cuts heating ...

Sungrow will equip the Kalanti BESS project in Finland with its 100 MWh PowerTitan 2.0 system, the first local deployment of this liquid-cooled technology.

For municipalities Our solutions facilitate reaching carbon neutrality and Finland's energy self-sufficiency goals. Investing in renewable energy generates ...

A report from BloombergNEF indicates global energy storage deployment is expected to exceed 300 gigawatts by 2030, reflecting a tenfold increase from 2020 levels. ...

SEB Nordic Energy's portfolio company Locus Energy, in collaboration with Ingrid Capacity, has announced the start of construction work on Finland's largest battery energy ...

The world's largest sand battery has started working in the southern Finnish town of Pornainen. Capable of storing 100 MWh of thermal energy from solar and wind sources, it ...

Vantaa Energy is one of Finland's largest urban energy companies, aiming for carbon negativity in energy

Finland's latest energy storage projects

production in 2030. The ...

Finland's new sand battery in Pornainen cuts emissions by 70% and stores 100 MWh, revolutionizing renewable energy storage and heating.

The world's largest sand battery has been inaugurated in Finland, capable of storing vast amounts of energy generated from renewable sources like solar and wind. The 13 ...

Discover how Merus Power's new energy storage facility enhances Finland's electricity grid, promoting sustainability and efficiency in the energy sector.

The first project, currently under construction, consists of 13 new grid scale battery energy storage systems across the south of Sweden, and is ...

A report from BloombergNEF indicates global energy storage deployment is expected to exceed 300 gigawatts by 2030, reflecting a tenfold ...

Neoen has started construction on a 2-hour 56MW/113MWh battery storage project in Finland, the largest in the Nordics.

Finland's energy storage market is experiencing significant growth, with several utility-scale BESS installations coming online in recent years. The total ...

New BESS projects in Finland are generally moving to 2-hour durations, including the largest under-construction at 112.9MWh, by IPP Neoen, ... Energy-Storage.news"" publisher Solar ...

Capable of storing 100 MWh of thermal energy from solar and wind sources, it will enable residents to eliminate oil from their district heating network, thereby cutting emissions ...
