

Generate electricity and store it before selling it to a third party

How does a third-party energy supplier work?

A third-party electricity supplier buys energy in bulk from the utility and then sells it to consumers at a different rate (often less than the utility's rate, at least initially). They act as go-betweens or middlemen. These companies can help you reduce your energy costs sometimes, but not always.

How does electricity resale work?

The electricity produced by generators is bought by an entity that will often, in turn, resell that power to meet end-user demand. These resale entities will generally buy electricity through markets or through contracts between individual buyers or sellers. In some cases, utilities may own generation and sell directly to end-use customers.

Can electricity be sold to end-users in the retail market?

After electricity is bought by resell or "supply" entities in the wholesale market, it can be sold to end-users in the retail market. As an illustration, an end user in a home may pay a local electric utility company for the electricity that it uses each month. The purchase and sale of electricity in this instance is happening in the retail market.

How does the wholesale electricity market work?

Retailers can now purchase power at wholesale prices and pass those savings on to consumers. The wholesale electricity market is constantly evolving, with new players and energy supply products entering the space. It's important for consumers to understand how this market works and the role it plays in their energy choices.

Can large consumers buy electricity directly from the grid?

There are, however, certain circumstances where large consumers of power are able to register in the wholesale markets and purchase wholesale electricity directly from the electric grid. Some retail energy suppliers are even offering programs to large customers to facilitate these transactions.

Should I sign up for a third-party energy supplier?

In many states, you can sign up for a third-party energy supplier, which introduces competition into the energy market and offers consumers more options. However, determining if they're right for you can be tricky, especially if you have a solar system. What is a Third-Party Energy Supplier?
