

Guatemala Energy Storage Power Supply Specifications

How much electricity does Guatemala have?

As of 2020, Guatemala had 4110 MW of installed electrical capacity, based primarily on hydro power (38.38%), fossil fuels (30.36%), and biomass (25.20%). Other renewable sources represented a much smaller percentage of capacity, including wind (2.61%), solar (2.25%) and geothermal energy (1.20%).

What is Guatemala's energy source?

This page is part of Global Energy Monitor's Latin America Energy Portal. In 2018, Guatemala derived 57.43% of its total energy supply from biofuels and waste, followed by oil (29.54%), coal (7.68%), hydro (3.22%), and other renewables such as wind and solar (2.12%).

What is the National Energy Plan of Guatemala?

The National Energy Plan of Guatemala defines the promotion of renewables as a priority. The plan aims to promote the use of clean and environmentally friendly energy for domestic consumption without losing sight of energy security and the need for supply.

How is electricity regulated in Guatemala?

Guatemala's electricity industry is regulated by the General Electricity Act (Ley General de Electricidad) and the CNEE (Comisi3n Nacional de Energ2a El3ctrica). The DGH (General Direction of Hydrocarbons) regulates the hydrocarbon sub-sector.

What is total energy supply?

Total energy supply (TES) includes all the energy produced in or imported to a country, minus that which is exported or stored. It represents all the energy required to supply end users in the country. Some of these energy sources are used directly while most are transformed into fuels or electricity for final consumption.

Does Guatemala produce natural gas?

The country produces 1,162 bbl/day of refined petroleum products. Guatemala does not produce any natural gas. Guatemala consumed 89,000 bbl/day as of 2016 of refined petroleum products. Oil and gas is imported primarily from the United States and Mexico.
