

How many volts does container power generation require

How much power does a reefer container need?

The reefer container power requirements consist of a three-phase electrical system with a supply voltage of 440/460 volt. Some units are available with three-phase 208/230-volt transformers. Units are available to run on 50 or 60 Hz.

What is the standard power supply voltage?

The standard supply voltage is 440/460 volts. Units can also operate with 208/230 volt three-phase transformers and are compatible with both 50 and 60 Hz frequencies. Grounding and Circuit Protection: A grounded power supply is mandatory for safety.

What voltage do I need for a reefer unit?

If you have any questions or concerns, have your electrician contact us at 844-388-5222. The reefer unit requires a three phase electrical system with a supply voltage of 440/460 volt. Some units are available with three phase 208/230 volt transformers. Units are available to run on 50 or 60 Hz.

What type of electrical system does Cascade container use?

Electrical System Compatibility: Cascade Container's reefer units require a three-phase electrical system. The standard supply voltage is 440/460 volts. Units can also operate with 208/230 volt three-phase transformers and are compatible with both 50 and 60 Hz frequencies.

How many amps does a 208/230 volt power supply need?

For power supplies using 208/230 volt, then the circuit breakers must have a minimum of 50 amps. The unit is delivered with a 460 volt cable and an ISO standard CEE power plug (59 feet/18 meters). The 230 volt cable does not have a power plug. The refrigerated container must be protected from electrical power surges.

What is the voltage tolerance for a reefer container?

Voltage Tolerance: The reefer containers are designed to accommodate a voltage variance of (+) or (-) 15%, providing flexibility in varying power conditions. Professional Installation: We recommend that a certified electrician perform the installation.
