

New Energy Battery Cabinet Teaching Aids

How can I help students learn about lead-acid batteries?

Be sure to label the experiment items, such as the galvanized nails as having zinc in them. It may be helpful to guide the students back to the idea of the lead-acid battery and to remind them of what types of materials are the best conductors of electricity. A brief tutorial on how to use a multimeter may be necessary.

Why is it important for students to understand a battery?

It is also important for students to understand that a battery consists of a cathode, an anode, and an electrolyte. Elaborate: Now that the students understand that a chemical reaction takes place in a battery, which enables electrons to move and cause an electric current, it is time for them to experiment.

What should be considered when preparing a battery?

Careful attention should be paid to the battery components, lead and sulfuric acid, and the chemical equations used to describe the process. The reaction that takes place between the acid and the metal should also be emphasized and can be explained using information from the Acids and Metals website.

Disassembly and maintenance training of new energy power battery pack (BMS); 9. CAN bus test and control training of new energy power battery (BMS) management system.
