

New Energy changed the battery cabinet and the speed is very slow

Why is my laptop slow after battery change?

"Laptop slow after battery change" may be caused by various reasons, such as damaged battery, lack of compatibility, corrupted battery driver, improper power plan, incorrect BIOS settings, and so on. To address this issue, you can attempt the following approaches. "Computer slow after RAM upgrade" is an annoying issue that plagues many users.

Can a faulty laptop battery be replaced?

This will improve your laptop's performance. However, if your laptop is slow due to a faulty battery, replacing it will restore the original performance of your laptop. If your Windows Laptop battery is not charging after replacement, the battery may be compatible.

Why is my laptop battery not charging after replacement?

If your Windows Laptop battery is not charging after replacement, the battery may be compatible. Get that checked. You may also run Power Troubleshooter, switch to High Performance Power Plan, reinstall your battery driver and update BIOS and see if that works. Read: Laptop battery not charging after Windows Update

What happens if a laptop battery is incompatible?

Incompatible batteries may supply inaccurate power, which may lead to CPU throttling or thermal throttling, which can lower the laptop's performance. Therefore, make sure that the battery you have installed on your laptop is compatible. You can check this by removing the new battery. Disconnect the battery from the laptop and connect the charger.

Is it worth it to get a real battery?

The Aircs are much more drastic here, they are 90% unusable without the battery. The first five to ten percent works like junk, after that it should be good. If it still works like crap at 100%, try getting a REAL battery and yes expect to pay over seventy bucks for something of worthwhile quality.
