What is power storage?

Can be connected to a Power Grid to store excess power production. The stored power can be used later in cases of high consumption. The Power Storage is a mid-game building used for buffering electrical energy. Each can store up to 100 MWh, or 100 MW for 1 hour.

Why do power distributors need mobile storage?

Mobile storage also allows power distributors to quickly move power to where it is needed most, such as during seasonal changes from summer to winter when power demands shift.

The TerraCharge battery energy storage system by Power Edison can make utility-scale energy storage mobile, flexible, and scalable.
