Does Slovenia have a nuclear power plant?

Slovenia has shared a nuclear power reactor with Croatia since 1981. The country is currently considering adding a second unit at the Krsko nuclear power plant. Per capita electricity consumption in Slovenia has slightly increased from 5300 kWh in 2000 to about 5800 kWh in 2023. Slovenia electricity generation by source (TWh)

How much energy does Slovenia produce?

Slovenia generated 68.8% of its electricity with zero carbon or carbon neutral sources in 2019, dominated by nuclear power and hydroelectricity. Fossil fuels oil, coal, and natural gas contributed 61% of the total energy supply of Slovenia in 2019.

How many wind turbines are there in Slovenia?

A solar power plant with a capacity of 6MW opened in 2023 at Brezice, linked to the hydro power plant. Slovenia had just 2 wind turbines in 2022. Onshore wind energy potential for Slovenia is typical of central and eastern Europe.

Does Slovenia use oil to generate electricity?

Following steep declines in use since 1990, Slovenia eliminated the use of oil for generating electricity in 2019. Renewable energy sources other than hydropower (e.g., biofuels, solar PV, waste, and wind) together provided 3.5% of total electricity generation in 2019.

Does Slovenia have solar power?

Per analysis published by the World Bank which considers natural features of a location such as altitude, humidity, cloud cover, and topography, Slovenia's solar PV potential is relatively low compared to global resources, but is comparable to that of other central and eastern European countries which lie north of the Alps.

The Medvode Hydroelectric Power Plant (also Medvode HPP, Slovene: Hidroelektrarna Medvode) is a run-of-the-river hydroelectricity in Slovenia. The ROR is located on the Sava River in ...
